Typical Analysis Results of tattoo ink containing C.I. 21110 Diarylide-Pigments in Tattoo inks release 3,3'-dichlorobenzidine by Irradiation with Laser Light

### **Pigments, Preservatives and Impurities in Tattoo Inks**

Results Of the 30 tattoo inks studied, the most commonly identified elements were aluminum (87% of the pigments), oxygen (73% of the pigments), titanium (67% of the pigments), and carbon (67% of the pigments). The relative contribution of elements to the tattoo ink compositions was highly variable between different compounds.

### **In Vitro Quantitative Chemical Analysis of Tattoo Pigments**

Nowadays, about 12% of the European and 20% of the US population are tattooed. Rising concerns regarding consumer safety, led to legal restrictions on tattoo inks and permanent make-up (PMU) inks. Restrictions also include bans on certain hazardous colourants. Both ink types use organic pigments for colour-giving, plus inorganic pigments for white and black and colour tones.

### **Identification of organic pigments in tattoo inks and**

Analysis of paint pigments Medieval oil paintings contained specific pigments to achieve the deep impressive color effects. A list of typical inorganic pigments and their chemical composition is :

### **Analysis of paint pigments - University of Notre Dame**

it was not feasible to sample all brands of tattoo inks, nor all of the colour-variants of inks, on the market in New Zealand only pre-made inks sold in liquid form were tested (ie, no pigments ...

### **Survey of Selected Samples of Tattoo Inks for the Presence**

Tattoo inks consist of pigments combined with a carrier, and are used in tattooing. Tattoo inks are available in a range of colors that can be thinned or mixed together to produce other colors and shades. Most professional tattoo artists purchase inks pre-made ...
