Physics of Time In the sciences generally, time is simply what a clock reads, but this hides a whole host of different conceptions of time used in physics. Physics is the only science that explicitly studies time, but even physicists agree that time is one of the most difficult properties of our universe to understand.

Physics of Time " Exactly What Is Time?

Heidegger's lecture course at the University of Marburg in the summer of 1925, an early version of Being and Time (1927), offers a unique glimpse into the motivations that prompted the writing of this great philosopher's master work and the presuppositions that gave shape to it.

History of the Concept of Time - Indiana University Press

Time travel is the concept of moving backwards or forwards to different points in time, in a manner analogous to moving through space, and different from the normal "flow" of time to an earthbound observer. In this view, all points in time (including future times) "persist" in some way.
